

CHSH's 1000 Retail Outlets To Provide Wide Variety Of Revenue!

China Shoe Holdings Inc. (CHSH)
\$0.58

CHSH's will initially open 100 company stores from now into 2008, they will then open an additional 900 stores that will be company owned, franchised, and privately owned. This company is hot to move fast and so will its trading. Watch for more news and get on CHSH first thing Monday!

The cost of buying the computer we wanted plus the printer was actually less than buying the same computer without the printer.

Is there a resolution to this problem?

db, and can I delete it?

But you can't get it.

I have only had three that were hardware failures.

With Safari you can enable a "private browsing" option.

The single biggest problem with IP addresses and most instant messaging services is this: you're connecting to the service, not to the person you're IMing.

See the links below for instructions.

The best you can do is identify the ISP that's providing the internet connection to the person you're conversing with.

You'll see that exactly one icon is presented for you to choose from.

It asked me to install the toolbar first.

That page is only mentioned here, so I'll know it's from someone who's taken the time to read this far!

Also no sign so far of any nasties hitchhiking on the download, and this all happened several months ago.

Changing the icon for a desktop shortcut is really easy.

The IT tech had both versions still on his computer, and was able to simulate the problem by choosing to use the older version.

I copied that off and decided to call it quits there.

- Safely Remove Hardware: where did the icon go?

If she inadvertently remains signed in when you are using the computer then there's not much she can do to prevent you from snooping around.

IP addresses could be shared, and you can't even imply that an IP address changing means that the person has changed - IP addresses could be reallocated.

I'd sure appreciate it if regular readers got a subscription of their own.

I found an interesting utility called "Get Data Back".

In short: there's no way to tell.

- How do I use a printer that's on another machine on my network?

Continue reading: "Why can't I access the Documents and Settings or Local Settings folders in Windows Vista?"

The reason: they've been moved.

I mean, it's great that there are very good quality printers and other electronics at exceptionally reasonable prices, but that means that when they break or wear out they're effectively disposable.

The ink pad on the cartridge is still wet with ink so it must be the print head that's dried out.

db is totally safe to delete.

My back-up strategy at work: a batch file, using RoboCopy, to mirror all of my documents onto a removable, USB memory drive.

I'm one of those people with multiple copies of everything, but I have no real back-up strategy and that almost cost me some real heart-ache.

If possible, he could try using another machine at the same location using the same internet connection to rule in or rule out a problem with a specific machine.

If not, you need to take extra precautions to make sure that your privacy remains secure.

There are two lessons here that I think make this story worthwhile: Stuff happens.

It can be used in small quantities in the home, but with care- definitely NOT for internal use.

"In insurance terms, your printer's been 'totaled'.

db files in some of my folders.

In fact, it was right above what we were looking at a moment ago: Just check Do not cache thumbnails, and no new thumbs.

Fortunately everything on the drive can be recovered from CDs, albeit more painfully.

There are two lessons here that I think make this story worthwhile: Stuff happens.
