Fast Thinking An R & E Network Renaissance

Subscriber Copy

Volume XIX, No.s 11-12, XX, No.s 1-5
February - August 2011
ISSN 1071 - 6327

Contents

Part 1

How Human Ingenuity, DIY Technology, and Global R&E Networks Are Remaking the World

Abstract	p. 11
Introduction: The American Political Context	
The Quiet Coup	p.12
Becoming a Banana Republic	p.13
The Wall Street–Washington Corridor	p.14
Susceptibility to Systemic Shocks	p.14
Outcome Will Be the Hollow State	p.15
The Network and Local Resilience	p.17
Chapter 1	
Collaboration Networks: the New Glue in a World of Failing Nation States?	
Consider Then What Lies Ahead	p. 18
What about the Rest of “Us”?	p. 19
Absolute Necessity of Grasping Transformative Impact of Technology on National Economies	p. 21
Role of U. S. UCAN Network in Uniting Research & Education with the Rest of America	p. 24
Thumbnail Sketch of the European & American Situation	p. 25
A Future Scenario of What is Possible	p. 28
The Power of the 20 th Century “Center” Leaks to the 21 st Century “Edge”	p. 29

Open Everything Brings Major Change	p. 30
Civilizing the Economy: A New Economics of Provision	p. 32
Economic Disconnect Addressed by Two Stories	p. 33
Creation of Economic Value Moves from Proprietary Silos to Collaboration Infrastructures	p. 34
Getting Better Faster by Working Together and By Creating New Architectures	p. 35
The Economy Must be Freed from Dependence on Scarcity Communications	p. 37
Collective Intelligence	p. 37
Bridging the Gap Between High End and Local Community	p. 38

Chapter 2

The R&E Networks in the Rest of World: National & Task Oriented

Europe, Asia- Pacific, China, India, Canada	p. 41
--	--------------

The United States

Early History of I2 and NLR	p. 42
National Lambda Rail	p. 43
The Merger Imbroglia	p. 45
US UCAN – a New Beginning	p. 46
Internet2 K20 Initiative	p. 52
The Civic Applications	p. 54
The NSF and Cyber Infrastructure Office	p. 58
Significant American Researchers	p. 60
The 10th Annual Global LambdaGrid Workshop	p. 65
Modern Research Needs an Integrated ICT Infrastructure: an Eco-system	p. 66
The American Model Versus the Netherlands	p. 67
The Future	p. 68
A Cautionary Note	p. 69
Survey of Internet2 Services and Activities	p. 71
Collaboration with DICE, GLIF and Joint Engineering Team	p. 74

Federated Identity Management	p. 75
Scientific Outreach	p. 77
Gratia Accounting	p. 77
Remote Instrumentation & Data Visualization Tools Working Group	p. 78
An Example of a State BTOP Grant -- Michigan	p. 79

Chapter 3

GLIF and SURFnet – a Parallel History of Infrastructure Development

Interviews with Erik - Jan Bos, CTO of SURFnet	p. 85
Fiber Acquisition in the Netherlands	p. 88
Cross Border Fiber in Europe	p. 91

GLIF -- The Beginnings and Organizational Structure

Open Protocol Issues and GLIF Inclusive Philosophy	p. 96
GLORIAD	p.105
Automation of Lightpaths for the Integrated Collaboration Facility	p.106
The Collaboration Infrastructure - SURFconext	p.106
Collaboration Infrastructure Software: Science Without Borders	p.107
How GLIF Provisions its Bandwidth	p.109
How SURFnet Enables Innovation	p.110
K-12 Education in The Netherlands	p.114

Chapter 4

The Collaboration Infrastructure in Detail

OpenDrac	p.115
Enablers of Cyber Infrastructure	p.117
Increasing Collaboration	p.124
Trusted Identity Management	p.129

Defining the Online Collaboration Environment p.137

Chapter 5

Supercomputing - the Eco-System Pinnacle

The Role of SARA, The Dutch National Supercomputer Center p.143

The Ecosystem Pyramid p.144

Figuring out What You Need for Resources p.147

Tuning the Machine p.150

Multi Disciplinary Teams and Blue Brain p.154

Need for Petascale Computing p.155

Why No Supernode and SARA Merger and Split p.159

Commercial Spinoff and Green Energy Concerns p.162

Impact of Collaboration infrastructure on SARA p.166

Where the Global Supercomputing Eco System is Headed

Sustained Petascale computing in US and Switzerland p.168

Switzerland p.171

Executive Summary p.176

PART 2

The Emergence of a Global Collaborative “Operating System”

Introduction p.181

The Collaborative Architecture of Grids p.183

Chapter 6

The Grid Ecosystem an Architectural Overview

Maurice Bouwhuis

Computational Eco-systems	p.185
The User and Software Perspective: Interfacing with the Grids	p.189
Communication and Collaboration is Transitioning from Point-to-Point to Fabrics of Grids	p.191
The Eco System Enabling the Data intensive Scientist's Work	p.192
The Physical Architecture of the CPU and Data Intensive Grid in Amsterdam	p.193

Chapter 7

Understanding the Workings of the Global Ecosystem Architecture

Steven Newhouse

Looking Under the Hood of the Grid Infrastructure	p.196
The Grid Services Software Stack	
Decides What Happens Where and When	p.201
Jumping into the GLIF Presentation on EGI	p.202
Grids in North America?	p.206

Chapter 8

BiG Grid as the Dutch National e-Science Infrastructure

Arjen van Rijn

The Dutch Eco-system and its Evolution	p.211
Organizing Large Scale Collaboration	p.213
Why Collaboration?	p.215
A Business Model?	P.216
Summing Up -- Big Grid Information, Infrastructure,	

and User Communities	p.220
Alexandre Bonvin's Netherlands - Italian e-NMR GRid Project	p.224

Chapter 9

Distributed ASCI Supercomputer (DAS)***Henri Bal and the Computer Science Testbed/Grid***

Editor's Introduction	p.226
DAS-3 Runs Independently from Big Grid	p.229
IBIS - a Language for Real World Distributed Computing	p.232
Demonstration – Distributed Hierarchical Heterogeneous Computing	p.234

Chapter 10

Life Sciences as an Immature Field***An Introduction from Bob Hertzberger***

Genomics Is Relatively New in the Netherlands	p.246
Life Sciences – a Young and Not Yet Stable Field	p.249
Lacking Enough Understanding to Enable Predictive Models	p.252

Chapter 11

Looking for Structure in the Life Science Wars***Timo Breit's Micro-array Transcriptomics***

The Many Nuances of Eco System Thinking	p.255
Bringing Computational Science to Bear on a Problem of Unbearable Complexity	p.260
Onward to e-Science	p.263

Chapter 12

The Gap***The Hard Place Between Biology, Systems
Biology and Economic Benefit - Brian Hanley***

Editor's Introduction	p.274
A Different Point of View	p.275
The Computing Environment of Biology	p.276

Genomics as a focus of Systems Biology	p. 277
The Medical-Industrial Complex and Economic Payoff to Society	p. 281
A Very Short Biography and Comments on My Doctoral Program	p. 284
My Point of View on the Preceding Two Chapters	p. 287

Chapter 13

Ecologies of Birds, Plants and Animals

<i>Willem Bouten Computational Geo Ecology</i>	p.292
Computational Geo-Ecology	p.293
The Fly Safe Bird Avoidance Model	p.295
The Military Radars	p.299
Tracking with GPS Backpacks Mounted on Birds	p.302
Bird Migration	p.304
Our Specific Bird Tracking Projects	p.306
Data-driven Models - Migration of Storks	p.308
Visualization of Our Data	p.315
Let's come back to Our Other Virtual Laboratories	p.316
Exploring the Economic Implications	p.320

Chapter 14

Virtual Collaboration for Research in Humanities and Science

The Virtual Research Environments Program at JISC For Universities in the United Kingdom - F. Van Till

	p.325
The Role of JISC in UK Higher Education	p.326
VRE - Presenting the Three Phases	p.328
What is a Virtual Research Environment?	p.329
First phases, VRE1 and VRE2	p.330
Documenting the Projects as a Teaching Tool	p.334
VRE2 - Focusing on Four Pilots	p.335
The Four Stage Two Pilots	p.336
Acquiring Users via Delivery of Productive Easy-to-use Tools	p.338
SDM VRE - VRE for the Study of Documents and Manuscripts	p.340

My Experiment: well-structured science	p.342
CREW - Collaborative Research Events on the Web	p.344
Small Tools	p.349

Chapter 15

Designing the Network for the Mother of All Grids

<i>David Foster on the World Wide LHC Computing Grid OPN</i>	p.353
A Star Network Where its Strength Lies in its Simplicity	p.355
The Complexity of the Tier-2s	p.363
Federated Flexibility	p.365
How the New Architecture Was Nurtured	p.366
An Open-Ended Model	p.370
LHC Open Network Environment	p.371
Access methods	p.371

Chapter 16

At a Critical Moment in American History New R&E Leadership at Internet2

Interview with I2 CEO Dave Lambert

Early Career	p.372
Owning and Lighting Fiber	p.375
The Way Forward	p.377
Collaboration Tools and Grid Middleware	p.379
Technology and a New Culture of Learning	p.381
The US UCAN Opportunity	p.383
Extending a Helping Hand	p.385
Role of the Incumbents in U.S. UCAN	p.386

Chapter 17

Conclusion -- At a very Difficult Time, the Necessity of Informed Choice

Communities will Need the Network Resources	p.390
---	-------

R&E Networks Married to Political Reality	p.398
Ask Yourself Where You Stand	p.399

Chapter 18

Fast Thinking: US UCAN's Investment in Our Own Communities	p.399
---	--------------

A National Strategic narrative	p.402
A Non Partisan Blueprint for Understanding Changes of 21st Century	p.403
At Stake is the Future of Local Higher Education, Libraries and Schools	p.408
Wanted: a US UCAN Strategy	p.409
Fast Strategic Thinking Needed	p.410

Chapter 19

Internet 2 Spring Meeting Shows the Challenge Ahead	p.413
--	--------------

The Utah-MCNC October 2010 Strategy Meeting	p.415
Thanks to SURF and SURFnet for their Support	p.417

Executive Summary	p.418
--------------------------	--------------

What's Happened	
In Whose Interest?	p.421

Postscript from Thailand	p.423
---------------------------------	--------------

Appendices

(A) Some Data on StarPlane and Das-3 Projects	p. 427
(B) Das-4 Overview	p. 429
(C) Relevant URLs from Late March to Early April 2011	p. 433
